

# Environment and Climate Change

The climate change is now obvious to every one of us and measures are taken to slow it down. The temperature on earth is increasing every day due to the excessive burning of fossil fuels which in turn produces greenhouse gases. Planting of more and more trees, cutting down on emissions and educating people about climate change are some of the ways of coming out of this issue.

# Environment and Climate Change

This template comes with multiple infographics which are completely customisable according to your needs, you may change colours and text according to the presentation.

The theme chosen goes with the environment-friendly practices so that whenever you present the intent is clearly visible.
